It is about managing complexity

Put state information in the class that works on it. Collaborating classes are unaware of the internal state of this object.

Keep a variable/function private, if possible. Use minimum visibility.

Every module should have a secret. If it does not have a secret, why does it exist?

Q30 – Shape; Q40Smell: Courses weekly, range, list; Q43smell: home address / work address

Q36 – USD, RMB;

Q41 – Session
